

It looks like I couldn't automatically detect distinct student assignments or find detailed rubric components directly from the provided document. Here's how we can proceed:

1. ****Manual Review:**** I'll need to manually examine the document to identify distinct assignments based on student names, headings, or page breaks.
2. ****Application of Rubric:**** Once assignments are separated, I'll apply the grading rubric to each one.

Please upload the file content in a text format here if possible, so I can assist you better. Alternatively, if there are specific details or parts you can share, that will also help in providing a precise grading summary.
